

FunICE

Dasher Boards

Depending on the application and size of your FunICE rink, we offer three different types of dasher boards.

»ZPW« model

Our "ZPW" model is the most stable option and especially suitable for hockey playing and outdoor-applications in case of tough weather conditions.

Frame and supporters: metal zinc construction with concrete weights
Wall: plywood panels (12mm, white)

»ZPE« model

The "ZPE" model is a more economic version of the "ZPW" model and can easily be used for recreational and professional skating and indoor applications. It is also highly suitable for mobile rinks, since it can easily be assembled and disassembled.

Frame and supporters: metal zinc construction with concrete weights
Wall: PE-HD-sheet (12 mm, white)

Standard design of our dasher boards are either rounded corners with a radius of 7.65 m OR right-angled corners. On demand we can produce also other designs and shapes.

Dimensions*

- Height: 1070 mm; except for "PEPE" model which has a height of 1030 mm
 - Machine gate width: 3400 mm (can only be provided for the models "ZPW" and "ZPE")
 - Players' gate width: 700 mm
 - Top sill 75 mm x 12 mm made of blue HD-PE for the "ZPW" and "ZPE" models
 - Top sill 75 mm x 25 mm made of blue HD-PE for the "PEPE" model
 - Kick protection plate 8 mm made of yellow HD-PE
- * Upon request, dimensions can be varied.

»PEPE« model

The "PEPE" model is the most economic version and only suitable for small rinks up to a length of 12 m and for private applications. This model is not suitable for professional use.

Frame, supporters and the wall are made of PE-HD
